

building hypermedia apis with pdf

Hypermedia As The Engine Of Application State (HATEOAS) is a component of the REST application architecture that distinguishes it from other network application architectures.. With HATEOAS, a client interacts with a network application whose application servers provide information dynamically through hypermedia.A REST client needs little to no prior knowledge about how to interact with an ...

I am Kin Lane, the API Evangelist... This is my online domain where I work to understand the world of the Application Programming Interfaces, also known as APIs.

API Evangelist

REST is acronym for REpresentational State Transfer.It is architectural style for distributed hypermedia systems and was first presented by Roy Fielding in 2000 in his famous dissertation.

What is REST – Learn to create timeless RESTful APIs.

Representational State Transfer (REST) is an architectural style that defines a set of constraints to be used for creating web services.Web Services that conform to the REST architectural style, or RESTful web services, provide interoperability between computer systems on the Internet.REST-compliant web services allow the requesting systems to access and manipulate textual representations of ...

At their core, Web services define a mechanism for machine-to-machine interaction using a network and XML. A key component of a Web service is a formal description with Web Services Description Language (WSDL). Until recently there was no formal language to describe REpresentational State Transfer (REST) Web services -- now there's WSDL 2.0.
