

### **cybernetics or the control pdf**

Cybernetics is a transdisciplinary approach for exploring regulatory systems—their structures, constraints, and possibilities. Norbert Wiener defined cybernetics in 1948 as "the scientific study of control and communication in the animal and the machine." In the 21st century, the term is often used in a rather loose way to imply "control of any system using technology." In other words, it is ...

2 Constructivism: the philosophy that models are not passive reflections of reality, but active constructions by the subject Cybernetics is the science that studies the abstract principles of organization in complex systems. It is concerned not so much with what systems consist of, but how they function.

Introduction and Overview. This research defines and outlines the ego death theory, as a new systematic research framework and paradigm. The ego death theory holds that the essence and origin of religion is the use of visionary plants to routinely trigger the intense mystic altered state, producing loose cognitive-association binding, which then produces an experience of being controlled by ...
